

*Welcome!*

**ADVANCED GENERATION PHONE FOR  
SENIORS HARD OF HEARING**

For those with hearing loss, daily activities such as talking over the phone can be demanding. Studies show people with hearing loss who become lonely have a higher possibility of experiencing depression in comparison to those who maintain strong bonding with family members and friends. Luckily, with the high quality amplified telephones that are available on the market, hard of hearing people can stay in contact with loved ones.

Amplified phones are specially designed for people with hearing loss, letting them turn up the volume as needed to hear conversations. Many people who make use of amplified phones do not wear hearing aids, but even people with hearing aids can as well.

Amplified phones also come with features where high and low frequencies can be adjusted to enhance clarity.

For those who travel frequently and need to comprehend telephone conversations while on the go, they may benefit from a portable telephone amplifier, which is an attachable device that amplifies the volume of a mobile phone or landline.

Those with mild to moderate hearing loss may benefit from utilizing a portable amplifier, which amplifies sounds by up to thirty decibels. These devices usually attach to the handset on a phone and have a built-in control for volume.

### **Do I need an amplified phone?**

If you're not certain if getting an amplified phone is the ideal choice for you, listed below are some considerations:

How often do you ask friends and family members to repeat themselves while over the phone?

Are you continually increasing the volume on the TV or radio?

Do you avoid talking over the phone because it's difficult to hear the person on the other side of the telephone?

If you answered yes to any of these questions, then you can significantly benefit from owning an amplified phone from Hear World Communications. Visit us now if you want to see the best selection and order a **phone for seniors hard of hearing**. Take advantage of our more than 25 years of direct experience in providing deaf, hearing-impaired and hard of hearing consumers with assistive technology.
